AMENDMENTS TO THE CLAIMS

The listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Original) In a web-accessing client-server system that includes a client web browser in communication with at least one server, and wherein the client web browser uses a television display device to display an image to a user, a method of scaling down an image that initially has a horizontal dimension that extends beyond the borders of the television display device, such that the entire horizontal dimension of the scaled image is visible within the horizontal dimension of the television display device without horizontal scrolling, the method comprising the acts of:

at the client web browser, determining a scaling factor defined by only the amount of scaling that is necessary to fit the image within the horizontal dimension of the television display device;

at the client web browser, scaling the image horizontally and vertically according to the scaling factor; and

displaying the image on the television display device, such that the entire horizontal dimension of the image is visible within the horizontal dimension of the television display device at the same time.

Application No. 09/867,366
Amendment "A" dated August 9, 2004

2. (Original) A method as defined in claim 1, wherein the image further comprises a selection icon corresponding to a hypertext object having an address, such that scaling the image produces a scaled selection icon and corresponding scaled icon coordinates, the method further comprising the acts of:

receiving a user input specifying scaled icon coordinates of the scaled selection icon;

scaling up the scaled icon coordinates to produce icon coordinates, wherein scaling up the scaled icon coordinates is based on dividing the scaled icon coordinates by the scaling factor; and

transmitting the icon coordinates to one of the at least one server to access information located at the address.

3. (Original) A method as defined in claim 1, wherein the scaling factor comprises the exact amount of scaling that is necessary to fit the image within the horizontal dimension of the television display device.

4. (Original) A method as defined in claim 1, wherein the image is originally sized for display on a computer monitor rather than on the television display device.

5. (Original) A method as defined in claim 4, wherein the image comprises a Web page, such that the scaling factor is defined by the amount of scaling necessary to fit the Web page within the horizontal dimension of the television display device.

6. (Original) A method as defined in claim 1, wherein the television display device comprises a television display device that complies with Phase Alternating Line standards.

Application No. 09/867,366

7. (Original) A method as defined in claim 1, wherein the television display device comprises a television display device that complies with National Television Standards Committee standards.

8. (Original) A method as defined in claim 1, wherein the television display device comprises a television display device that complies with Quarter Common Intermediate Format standards.

9. (Original) A method as defined in claim 1, wherein the television display device comprises a television display device that complies with High-Definition Television standards.

10. (Original) In a web-accessing client system in communication with at least one server system, the client system being coupled to a television display device, a method of providing a user interface for enabling a user to access the at least one server system, the method comprising the acts of:

receiving a Web page image from the at least one server system, wherein the Web page image has a horizontal dimension that is larger than the horizontal dimension of the television display device;

scaling down the Web page image horizontally and vertically according to a scaling factor, that is defined by only the amount of scaling necessary to fit the Web page within the horizontal dimension of the television display device;

displaying the scaled Web page image on the television display device within the display environment, such that the entire horizontal dimension of the Web page image is visible within the horizontal dimension of the standard television display device without horizontal scrolling.

Application No. 09/867,366
Amendment "A" dated August 9, 2004

11. (Original) A method as defined in claim 10, wherein the Web page image comprises a hypertext icon having an address, and wherein the act of scaling the Web page image produces a scaled hypertext icon, the method further comprising the acts of:

receiving a user input specifying scaled icon coordinates that correspond to the scaled hypertext icon;

up scaling the scaled icon coordinates to produce icon coordinates, wherein up scaling the scaled icon coordinates is based on dividing the scaled icon coordinates by the scaling factor; and

transmitting the icon coordinates to one of the plurality of server systems to access information corresponding to the address of the hypertext icon.

12. (Original) A method as defined in claim 10, wherein the scaling factor comprises the exact amount of scaling that is necessary to fit the Web page image within the horizontal dimension of the television display device.

13. (Original) A method as defined in claim 10, further comprising the act of receiving a user input that is entered by a user from a remote control device for causing the image to be scrolled vertically on the display device.

14. (Original) A method as defined in claim 10, wherein the television display device complies with Phase Alternating Line standards.

15. (Original) A method as defined in claim 10, wherein the television display device complies with National Television Standards Committee standards

16. (Original) A computer program product for implementing, in a web-accessing client-server system that includes a client web browser in communication with at least one server, and wherein the client web browser uses a television display device to display an image to a user, a method of scaling down an image that initially has a horizontal dimension that extends beyond the borders of the television display device, such that the entire horizontal dimension of the scaled image is visible within the horizontal dimension of the television display device without horizontal scrolling, the computer program product comprising:

a computer-readable medium carrying computer-executable instructions for implementing the method, the computer-executable instructions comprising:

program code means for determining a scaling factor defined by only the amount of scaling that is necessary to fit the image within the horizontal dimension of the television display device;

program code means for scaling the image horizontally and vertically according to the scaling factor; and

program code means for displaying the image on the television display device, such that the entire horizontal dimension of the image is visible within the horizontal dimension of the television display device without horizontal scrolling.

17. (Original) A computer program product as defined in claim 16, wherein the scaled Web page image extends beyond the vertical borders of the television display device.

18. (Original) A computer program product as defined in claim 17, wherein the computer-readable medium further comprises program code means for receiving a user input that causes the Web page image to be scrolled vertically on the television display device.
